SPRING 2016 NEWSLETTER

Our spring landscaping and maintenance season is in full swing! We have completed core aeration, as well as the initial round of fertilization. The first round of routine trimming on non-flowering deciduous shrubs has begun and will continue throughout the summer season. Weekly lawn maintenance has been established on all properties and will continue as scheduled.

To ensure our success in providing the highest level of turf maintenance, we have suggested the application of preventative grub control insecticide. As with many preventative measures, time is of the essence. If you have signed your grub control proposal, services will begin the last week of May. For those who have yet to return their signed proposal, we ask that you forward your acceptance or rejection of this Proposal as soon as possible, so that we may promptly schedule application. Thank you, in advance, for your attention to this matter.

If you have yet to schedule a walk through to go over any questions, concerns, or enhancements on your property, we ask that you contact us as soon as possible so that we may schedule a convenient appointment. We look forward to the continued service of your property, thank you for your business.
